Working with global security advisories from the GitHub Advisory Database

Browse the GitHub Advisory Database and submit improvements to any global security advisory.

About the GitHub Advisory database

The GitHub Advisory Database contains a list of known security vulnerabilities and malware, grouped in two categories: GitHub-reviewed advisories and unreviewed advisories.

About global security advisories

Global security advisories live in the GitHub Advisory Database, a collection of CVEs and GitHub-originated advisories affecting the open source world. You can contribute to improving global security advisories.

Browsing security advisories in the GitHub Advisory Database

You can browse the GitHub Advisory Database to find advisories for security risks in open source projects that are hosted on GitHub.

Editing security advisories in the GitHub Advisory Database

You can submit improvements to any advisory published in the GitHub Advisory Database.
