About disabled SAML SSO for your enterprise

Disabling SAML

Further reading

You can disable SAML single sign-on (SSO) for your enterprise account.

About disabled SAML SSO for your enterprise 🔗

After you disable SAML SSO for your enterprise, the following effects apply:

- All external identities for your enterprise will be removed. For more information, see - All external identities for the enterprise will be removed. For more information, see "[Viewing and managing a user's SAML access to your enterprise](#)."
- Any SAML settings configured for individual organizations within the enterprise will take effect. For more information, see "[Enabling and testing SAML single sign-on for your organization](#)."

Disabling SAML 🔗

1 In the top-right corner of GitHub.com, click your profile photo, then click **Your enterprises**.

2 In the list of enterprises, click the enterprise you want to view.

> **Note:** If you're unable to access the enterprise because your IdP is unavailable, you can use a recovery code to bypass SSO. For more information, see "[Accessing your enterprise account if your identity provider is unavailable](#)."

3 In the enterprise account sidebar, click ⚙ **Settings**.

4 Under ⚙ **Settings**, click **Authentication security**.

5 Under "SAML single sign-on", deselect **Require SAML authentication**.

6 Click **Save**.
