Managing supply chain security for your enterprise

You can visualize, maintain, and secure the dependencies in your developers' software supply chain.

About supply chain security for your enterprise

You can enable features that help your developers understand and update the dependencies their code relies on.

Enabling the dependency graph for your enterprise

You can allow users to identify their projects' dependencies by enabling the dependency graph.

Viewing the vulnerability data for your enterprise

You can view vulnerability data from the GitHub Advisory Database on your GitHub Enterprise Server instance.

Configuring Dependabot to work with limited internet access

You can configure Dependabot to generate pull requests for version and security updates using private registries when your GitHub Enterprise Server instance has limited, or no, internet access.
